- "Debugging": How to make sure gradient descent is working correctly.
- How to choose learning rate α .

Making sure gradient descent is working correctly.

Making sure gradient descent is working correctly.

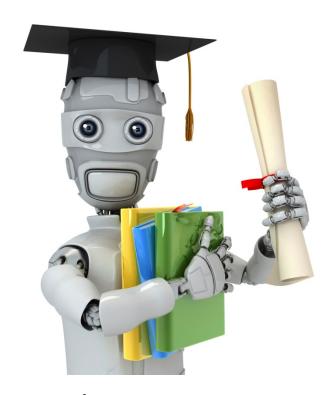

- For sufficiently small lpha, J(heta) should decrease on every iteration.
- But if lpha is too small, gradient descent can be slow to converge.

Summary:

- If α is too small: slow convergence.
- If α is too large: $J(\theta)$ may not decrease on every iteration; may not converge. (Slow converge also possible)
